

$$6\frac{1}{5} \div 2\frac{3}{4}.$$

1. Find six and one fifth divided by two and three fourths.
2. We rewrite six and one fifth. For the numerator, we have 6 times 5, plus 1. For the denominator, copy the denominator 5. For the second fraction, we rewrite two and three fourths. For the numerator, we have 2 times 4, plus 3. For the denominator, copy the denominator 4.
3. Instead of dividing by eleven fourths, we will multiply by the reciprocal, which is four elevenths.
4. When multiplying fractions, we multiply the numerators together and the denominators together. So the numerator is 31 times 4, and the denominator is 5 times 11.
5. Simplifying the numerator and denominator separately, we have one hundred twenty-four over fifty-five. Since 124 and 55 do not share any common factors, this is our final answer as an improper fraction.
6. We often leave a final answer as an improper fraction, but if needed, we can rewrite it as a mixed number. Since 55 goes into 124 two times, we can rewrite this as a mixed number. The whole number is 2, and the fraction is the remainder, which is 14, over the original denominator, which is 55. Both answers are correct: the improper fraction 124 over 55 is correct, but also, the mixed fraction 2 and 14 over 55 is correct.

$$6\frac{1}{5} \div 2\frac{3}{4}.$$

$$= \frac{31}{5} \div \frac{11}{4}$$

1. Find six and one fifth divided by two and three fourths.
2. We rewrite six and one fifth. For the numerator, we have 6 times 5, plus 1. For the denominator, copy the denominator 5. For the second fraction, we rewrite two and three fourths. For the numerator, we have 2 times 4, plus 3. For the denominator, copy the denominator 4.
3. Instead of dividing by eleven fourths, we will multiply by the reciprocal, which is four elevenths.
4. When multiplying fractions, we multiply the numerators together and the denominators together. So the numerator is 31 times 4, and the denominator is 5 times 11.
5. Simplifying the numerator and denominator separately, we have one hundred twenty-four over fifty-five. Since 124 and 55 do not share any common factors, this is our final answer as an improper fraction.
6. We often leave a final answer as an improper fraction, but if needed, we can rewrite it as a mixed number. Since 55 goes into 124 two times, we can rewrite this as a mixed number. The whole number is 2, and the fraction is the remainder, which is 14, over the original denominator, which is 55. Both answers are correct: the improper fraction 124 over 55 is correct, but also, the mixed fraction 2 and 14 over 55 is correct.

$$\begin{aligned}
 &6\frac{1}{5} \div 2\frac{3}{4} \\
 &= \frac{31}{5} \div \frac{11}{4} \\
 &= \frac{31}{5} \times \frac{4}{11}
 \end{aligned}$$

1. Find six and one fifth divided by two and three fourths.
2. We rewrite six and one fifth. For the numerator, we have 6 times 5, plus 1. For the denominator, copy the denominator 5. For the second fraction, we rewrite two and three fourths. For the numerator, we have 2 times 4, plus 3. For the denominator, copy the denominator 4.
3. **Instead of dividing by eleven fourths, we will multiply by the reciprocal, which is four elevenths.**
4. When multiplying fractions, we multiply the numerators together and the denominators together. So the numerator is 31 times 4, and the denominator is 5 times 11.
5. Simplifying the numerator and denominator separately, we have one hundred twenty-four over fifty-five. Since 124 and 55 do not share any common factors, this is our final answer as an improper fraction.
6. We often leave a final answer as an improper fraction, but if needed, we can rewrite it as a mixed number. Since 55 goes into 124 two times, we can rewrite this as a mixed number. The whole number is 2, and the fraction is the remainder, which is 14, over the original denominator, which is 55. Both answers are correct: the improper fraction 124 over 55 is correct, but also, the mixed fraction 2 and 14 over 55 is correct.

$$\begin{aligned}
